

## Access Panel Reduces Air Infiltration

Bloomington, MN – January 18, 2010

JL Industries has designed a fully-gasketed access panel to reduce air infiltration through walls and ceiling openings. This panel is ideal for laboratories, pressurized rooms, climate-controlled room and dusty or high-moisture environments. Control unwanted air through the building envelope and improve HVAC zone performance using the [ATM panel](#) with a high-performance gasketing system. The 16 gauge frame and door form an air-tight seal with the EPDM rubber gasket and features paintable 1” trim. The ATM Panel is now available in 4 standard sizes in gray powder coat primer.

JL Industries features a full line of metal access panels and other products for the commercial construction industry. JL is an Activar Construction Products Group company based in Bloomington Minnesota, which manufactures products for division 7, 8 and 10.
