JL Industries Introduces Fire Extinguisher Cabinets for Schools

JL Industries, Minnesota-based manufacturer of steel, aluminum and stainless steel fire extinguisher cabinets has introduced a cabinet designed for use in school buildings of all types.

Designed with durability in mind, these cabinets are fabricated from heavy-duty, 12 gauge steel with baked-on white powder coat finish. Doors are flush-mounted with a continuous hinge and feature tempered glass or optional Lexan® glazing.

These cabinets are available in fully-recessed, partially-recessed with 2-1/2" trim or surface-mounted models which require no wall opening. Both recessed cabinets are ADAC-compliant and available in a fire-rated configuration for installation in fire-rated openings.
