

New, Decorative AED Storage Cabinet

If your upscale project calls for a free-standing AED and cabinet, JL Industries, has introduced an attractive new model that is functional, yet decorative. The 1483 Series features a heavy-duty steel tubing frame in an inverted “u” shape welded to a structural steel oval base. The entire unit is powder-coated in black, white or silver metallic finish, however, many optional color combinations are also available to match your theme.

In commercial applications such as shopping malls, airports and health clubs, safety equipment doesn't have to detract from the décor. This defibrillator cabinet has a clear plexiglass front and is equipped with a battery-operated audible alarm that is activated when the AED is removed from the cabinet. An optional siren strobe alarm can also be provided.

JL Industries is a division of the Activar Construction Products Group which supplies products to the commercial construction industry.
